Governance-Sentinel Audit Report

Framework version: 1.2.0

Generated: 2026-10-23 08:24:38 UTC

Reference: BCBS 239, Basel Committee, January 2013

1. BCBS 239 data-quality audit

Field-level checks on critical data elements. Principle numbers follow BCBS 239 (BIS, January 2013). A PASS on one field is not the same as compliance with the whole principle.

[Principle 4 - Completeness] Completeness: FAIL

transaction_id must be populated. This supports Principle 4. It does not, by itself, show group-wide risk-data aggregation.

[Principle 3 - Accuracy and Integrity] Accuracy: FAIL

amount must be present and between 0 and 1000000 inclusive. This is a threshold check, not a statistical outlier test. It supports Principle 3, not Principle 7.

[Principle 3 - Accuracy and Integrity] Validity: FAIL

currency must be present and one of EUR, USD, GBP. Validity is a data-quality dimension supporting Principle 3. It is not a BCBS 239 principle.

[Principle 5 - Timeliness] Timeliness: FAIL

timestamp must be present and on or after 2023-01-01. Demo reference date for Principle 5. This is not a T+1 control.

Not implemented in this prototype: Principle 6 (Adaptability), Principle 7 (Accuracy), Principle 11 (Distribution). Principle 7 is about how accurately risk reports convey aggregated data. It is separate from Principle 3.

2. Algorithmic fairness (disparate impact)

Illustrative bias measure for discussions of EU AI Act Article 10 (data governance). This is not an Article 13 transparency file and not a conformity assessment. The 0.80 cutoff is the US EEOC four-fifths rule, which the EU AI Act does not itself prescribe.

Disparate impact ratio: 0.0000

Illustrative threshold: 0.80 (US EEOC four-fifths rule)

Status: FAIL [CRITICAL REMEDIATION REQUIRED]

DI = 0.00 on this synthetic file: the unprivileged group (age_category 1) has no positive labels and the privileged group (age_category 2) does. That is a property of the demo data.

Prepared by: Daniele Delens - Senior Data Governance and BCBS 239 Specialist

Demo output on synthetic data. Not a supervisory filing and not evidence from a production control.
